Skills

Machine Learning Data preprocessing, ML Algorithms, Model building, Model Evaluation	Generative AI Langchain, LangGraph, LLMs, Prompt Engineering, RAG
Deep Learning ANN, CNN, RNN, LSTM	Python Numpy, Pandas, OOps
SQL Joins, Sub Queries, Window Functions	Data Analysis Exploratory Data Analysis, Data Cleaning, Data Transformation, Feature Analysis

Education

Bachelor of Technology , St. Mary's Women's Engineering College - 78%	2021 – 2025
--	-------------

Projects

- Car Price Prediction using Machine Learning**
- Built a Random Forest Regression model to predict used car prices with ~75% R² score.
 - Performed data cleaning, feature engineering, and EDA to find factors affecting car prices.
 - Handled missing values, encoded categorical variables, and transformed features for model training.
 - Tuned hyperparameters to reduce MAE and RMSE.
 - Created a Streamlit app for real-time car price prediction and basic visualizations.
- Retrieval-Augmented Generation (RAG) Based Legal/Banking Assistant**
- Built a RAG pipeline to answer questions from 500+ unstructured documents, including PDFs and text files.
 - Split documents into chunks and generated embeddings using Hugging Face models for similarity search.
 - Retrieved top 3–5 relevant chunks for each query and passed them to the LLM to generate answers.
 - Implemented the workflow using LangChain to manage prompts and handle token limits.
 - Improved answer results by 30% compared to using the LLM without document retrieval.
 - Reduced average response time to under 3 seconds per query by adjusting chunk size and retrieval settings.
- AI-Powered Resume Analyzer & CSV Generator (LangChain)**
- Processed 100+ resumes from PDF and DOCX files and extracted details such as summary, experience, skills, and links.
 - Converted unstructured resume text into structured fields using LangChain and Google Gemini.
 - Allowed bulk resume upload using ZIP files and extracted data from multiple resumes at once.
 - Saved the extracted information in CSV format for further analysis.
 - Handled file reading, text extraction, and basic text cleaning before sending data to the model.
 - Built a Streamlit web app to upload resumes, view extracted information, and download results as CSV files with basic error handling for unsupported files.
- Sentiment Analysis of Movie Reviews from Youtube Comments Using Deep learning**
- Built a sentiment analysis model for YouTube movie review comments using LSTM with GloVe word embeddings.
 - Collected and cleaned 10k+ YouTube comments using YouTube API with preprocessing and lemmatization.
 - Used GloVe embeddings to convert text into meaningful numerical vectors for better semantic understanding.
 - Trained and tuned an LSTM model with regularization to enhance performance.
 - Evaluated the model using F1-Score, Precision/Recall, and Confusion Matrix for balanced multi-class classification.

Certificates

Data Science With GenAI  — Learned Python, SQL, statistics, machine learning, data analysis, and basics of Generative AI including LLMs and RAG
